

Burlington Facility

During 1989, Bull Moose Tube Company went north to expand our regional concept. Bull Moose Tube Limited began operations to better serve our Canadian and Northern U.S. customers.

Burlington produces primarily mechanical tubing in a variety of finishes including hot rolled, hot rolled pickled and oiled, cold rolled, and coated (galvalume or galvanized). These finishes are available in standard rounds, rectangles and squares, as well as specialty products such as ovals.

Also offered are the small Hollow Structural for the Canadian market. Popular in Canada, Bull Moose produces wall thicknesses such as .100" and .125". Contact your sales representative today about the Burlington Facility's products.

The manufacturing facility has undergone extensive modernization. The mills consistently produce and finish quality tubing to meet the demands of our diverse customer base.
