

ABOUT

BULL MOOSE®
TUBE

STANDING STRONG AFTER A HALF-CENTURY OF SOLID GROWTH.

Bull Moose was founded in 1962, building right from the start on such core values as reliable quality, stable production, and exemplary service.

The following decades saw Bull Moose Tube grow from a single plant in Missouri to eight production operations from coast to coast. Those far-reaching facilities enable us to be particularly well positioned for responsive service that sets the standard for the industry.

Today, Bull Moose stands as the #1 producer of sprinkler pipe and mechanical steel tubing, and is also the industry's second-largest producer of structural steel tubing. We strive daily to be known for character, competence and creative innovation as we press on into our next era of growth.

INNOVATIVE MANUFACTURING

Our quality manufacturing process forms tube directly from the highest-grade steel coil, eliminating the “mother-tube” process. This enables us to form sharper corners, craft the straightest tube, and make the most consistent welds.

Bull Moose innovation is further embodied in products such as tube that will not rust in outdoor applications, and our 110KSI product—the strongest, lightest tube in the market.

DELIVERING PRODUCTS AND SERVICES OF EXCEPTIONAL STRENGTH

PRODUCT LINES INCLUDE:

- Mechanical Square Tube
- Mechanical Pipe
- Hollow Structural Section (including our ultra high-strength, lightweight Stratusteel™ product)
- Sprinkler Pipe (including Schedule 10, Schedule 40, Reddi Pipe™, Eddy Pipe™)
- Custom Shapes and Sizes, including a full range of metric sizes.

PRIMARY INDUSTRIES SERVED:
