

WE'VE TURNED THE TIDE...

in sprinkler pipe technology.

With its extraordinarily high C Factor, Hydrologic™ pipe may give you entirely new options to consider as you deal with questions such as:

- ☐ Can I downsize my sprinkler pipe sizes in my Deluge System and still meet requirements—with reduced labor, hanger sizes, and seismic bracing?
- ☐ Can I lower my Fire Pump Demand, and/or downsize the pump?
- ☐ Can I use the existing domestic water supply line to meet demand “Q” without an additional water main tap?

Consider the potential for these questions, and you'll quickly see the logic in Hydrologic.

better pipe can mean bigger savings.**

- C-Factor of 150!*
- Metallurgically bonded surface alloy — not a coating.
- Fabricates like standard black steel.
- Meets ASTM A135/A795 standards.
- FM Approved, UL pending

*Not verified by FM. C-Factor evaluated by independent lab with full documentation.
